CUSTOMER PAYMENT NOTICE

A merchant surcharge fee of 3% will be applied to all credit card transactions as of 2-12-2024

Lake Forest Gardens is a family-owned, 600-acre nursery located in the hills of Fombell, PA, just five miles west of Zelienople (Rt. 588). While specializing in the production of Arborvitae, Juniper, Hemlock, Spruce, Pine, and Ornamental Shades, our retail and re-wholesale yard offers a wide variety of top quality landscape material.

All resale items are subject to **change in price and availability without notice**. This pricelist supersedes any and all previous list. Please email or fax to solicit a quote for high volume projects.

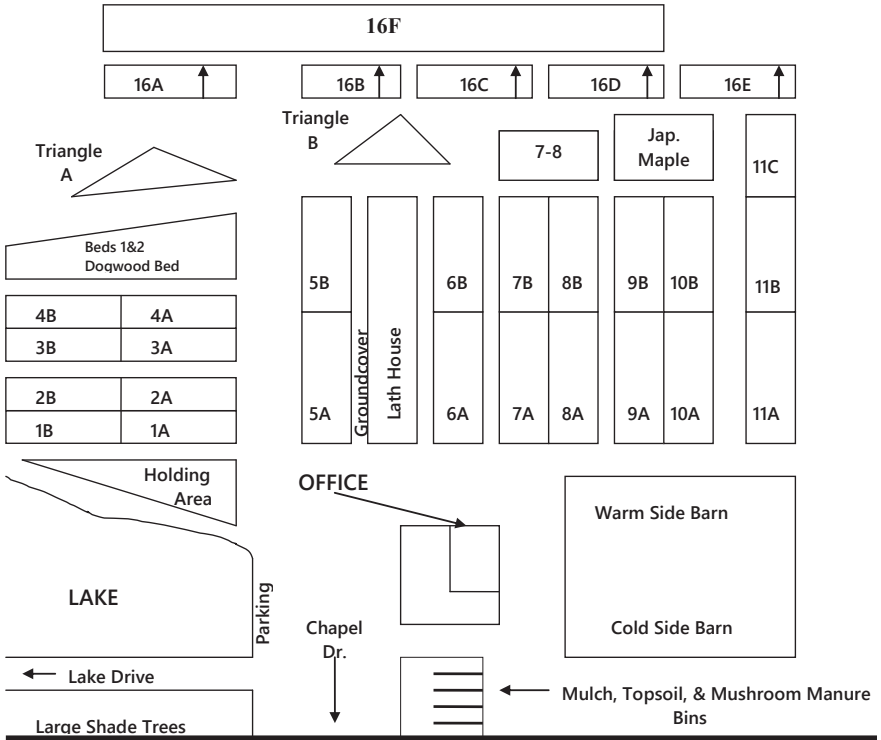

Walk-ins are welcome: We have multiple JD Gators to assist you around the nursery. If your clients wish to visit our facilities, they **must be** accompanied by you, our customer. You must escort them through the nursery and be available to answer any question they may have.

Orders: All Tagged material will be returned to inventory **10 days after scheduled pickup or delivery date**. Please remember ... it is the responsibility of the customer at time of pick up to provide a tarp that is suitable to cover and protect the plants that are being loaded from windburn and excessive drying during transport. Lake Forest is not responsible for the quality of material leaving without being properly tarped.

Due to plant material is a perishable good and we have no control over what happens or how it's been handled after it leaves our possession, Lake Forest Gardens reserves the right to refuse any returns or exchanges

A service charge of \$40.00 will be applied for all returned checks.

LFG Staff Tips - - Tree Planting Techniques

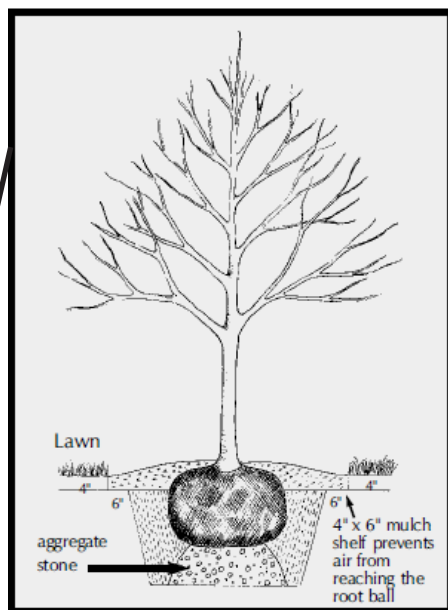

OLD METHOD

Soil shrinks away from the ball hole in dry weather, allowing air to enter the planting hole and dry out the root ball.

NEW METHOD

New Method for planting trees in tree lawns and open areas. We have found this method to be very effective in aggregate stone preventing the tree root ball from drying out during periods of extreme arid weather conditions.

VERY IMPORTANT: Incorporate a mulch shelf that is 6" wide by 4" deep into the planting hole to protect the root ball from exposure to drying air (see diagram)

The mulch shelf protects the roots from air exposure, preventing the root ball from losing excessive moisture.

In heavy clay soils place the root ball on a mound of washed river aggregate stone (see diagram). The depth of the stone will depend on the soil density, in heavier soils incorporate more stone.

During periods of dry weather apply 1" of water to newly planted trees per week. This equals 1 gallon of water per square foot of soil surface.
